Functions and performance levels:

basic requirements for safety footwear (see Table 2 and 3 of EN ISO 20345:2011): all mandatory ones, among which:

SRC (*) = Slip resistance – meets the following requirement:

- surface: ceramic / lubricant: detergent solution;
- surface: steel / lubricant: glycerol.

Additional requirements (Tab. 18 and 20 of EN ISO 20345:2011):

S3 = closed seat region, antistatic properties, energy absorption of seat region, resistance to fuel oil, water penetration resistance and absorption (water-repellent upper), penetration resistance, cleated outsole; **HI** = heat insulation; **HRO** = resistance to hot contact of the outsole.

(*) the final level of the anti-slip features is achieved after the first hours of trial stage.

Note: the penetration resistance of the synthetic stitch proof insole tends to decrease with the diameter of the perforating object; in return the synthetic insole offers more protective surface and ergonomics advantages (flexibility, insulation, humidity and impact absorption).

Marking:

on a stitched label and containing the following information:

- **CE Marking**;
- name of the manufacturer (printed on the footwear);
- designation of the footwear ;
- Standard of reference + safety symbols;
- size of footwear (also printed in the outsole);
- month and year of production;
- additional info: internal code etc.
